Day 1 - Interview Prep 21/03/2023

1.Python Installation (Add path to local environment)
from Python official website
2.Referring Documentation
3.Running python with Visual studio code (Setup up python interpreter)

Error You may face:
1. python syntax.py
2. Python was not found; run without arguments to install from the Microsoft Store, or disable this shortcut from Settings > Manage App Execution Aliases.
3. If u have 2 python(version 2 & 3) in your system
4. You can enable or disable one python in manage app execution aliases
   Sln : py filename

Syntax Rules:

1. **Save the file with .py extension**
2. **var a=10**
   a="test" -> dtype(a) —> string

3. **if (a==10): → true**
      print('yes')
   elif (a>10):
      print('No')
   else:
      print('No')
   4.Looping commands -> for , while

Difference b/w for and while

1.For loop will check the condition and then enters to perform the logic

2.While loop will run the logic and then check the condition
